ResBios sees biosciences as a crossroads in the relations between science and society and will deploy actions to align Responsible Research and Innovation (RRI), the Sustainable Development Goals (SDGs) and Open Science (OS) by promoting institutional change within the involved organisations.

RRI provides a framework for bringing research closer to the needs and values of society. The SDGs recognize the needs for strategies that improve health and education, reduce inequality, and spur economic growth. And OS extends the principles of openness to the whole research cycle, aiming to make scientific research, data and their dissemination accessible to any member of society.

This project has received funding from the European Union's Horizon 2020 research and innovation programme under the grant agreement N° 872146
